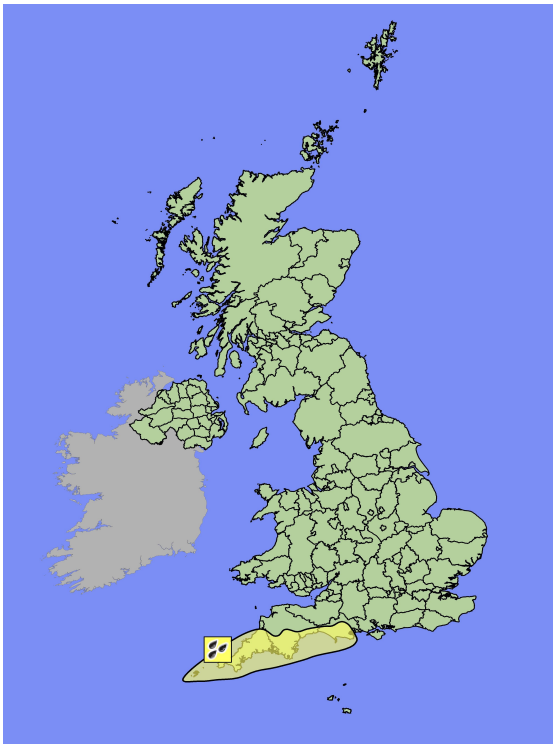
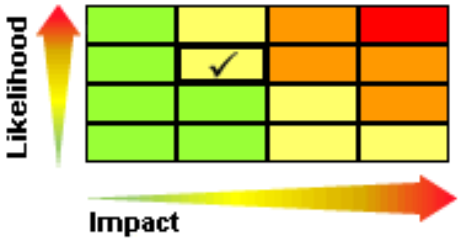
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal system will move eastwards across the UK during Wednesday, bringing a period of heavy rain to southwestern parts of England in particular. Rainfall totals of 20-30 mm are expected fairly widely within the area of the Alert and given that much of the rain will fall within 6 hours and that the ground is already saturated, there is a risk of both localised surface water and river flooding.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:00 on Wed, 19th Dec 2012** until **15:00 on Wed, 19th Dec 2012**

A period of heavy rain, accompanied by strong southeasterly winds, is expected to move eastwards across southwestern parts of England during the first part of Wednesday. Given that the ground is already saturated, the public should be aware of the risk of further localised flooding.
